

SPECIALITY FIBERS

Many types of optical fibers are available in the market for special applications.

Coating material ,operating temperature interwall, bandwidths or core sizes etc. are different from standart data and telecom usage optical fibers

These are used mainly for ;

- For laboratory and military/ defense applications, physics, nuclear power plants, aerospace, distributed temperature sensing (DTS), mining, marine, oil, gas and transportation markets etc.

We categorize these as **SPECIALITY FIBERS** !

Draka Optical Fiber division is number 1 in the world for concerned market as production capacity and sales value too.

All of these products are produced upon Customer request in desired spec.s

Therefore, we do not prefer to put spec.s of these types of optical fibers in our website but we can supply all concerned product range upon request.

Pls. contact us for further information acc. to you needs
